oogle is an American IT company which has a number of products its currently providing to the world. Amongst some them are gmail, google app engine, android studio, beacons, google API etc.

But for this article is we are particularly intrested in one of google products called cloud storage (cloud computing

Cloud Computing is a term that encompasses a wide range of use cases and implementation models. In essence, a computing cloud is a large shared pool of computing resources including data storage. When someone needs additional computing power, they are simply able to check this out of the pool without much (often any) manual effort on the part of the IT team, which reduces costs and significantly shortens the time needed to start using new computing resources. Most of these clouds are run on the public Internet by well-known companies like Amazon and Google, where similar economies of scale begin to apply.[1] Case studies provide detailed tools for analysis of cloud storage devices using popular cloud storage services Includes coverage of the legal implications of cloud storage forensic investigations.[2] While nearly all have premium offerings that provide more space, the free cloud storage offered is usually more than enough for most people.

Better yet, many of these free cloud storage providers give you even more free space for referring friends or performing other tasks.[3]
